

McAfee® Total Protection 2009

Problem:

The firewall component of McAfee® Total Protection 2009 can block some of Spysure's components from connecting. In a single PC (Home or Office version) scenario this should not normally cause any problems, but in a Network setting, this may result in Spysure data being lost in transmission.

Solution:

1. Click on the "M" taskbar icon to launch McAfee® SecurityCenter.
2. Click on the **Internet & Network** button.
3. Click on the **Configure** link.
The **Internet and Network Configuration** will open.
4. Under the heading **Firewall protection is enabled** click on the **Advanced** button.
The **Firewall Configuration** will open.
5. Click on the **System Services** link.
6. In the **System Service** list tick the item **Windows File Sharing (NETBIOS) Ports 137-139**.
7. Click the **Add** button.
8. Enter the following information:

System Service Name:	Spysure <i>(or a name of your choice)</i>
Local TCP/IP Ports:	2000
Local UDP Ports:	2000
9. Click the **OK** button.
10. Click the **OK** button.
11. Close McAfee® SecurityCenter.
